A PROJECT REPORT ON

CAMPUSNOVA AI

B.TECH CAMPUS PLACEMENT PREDICTIVE INTELLIGENCE & DATA SCIENCE PLATFORM

Submitted in partial fulfillment of the requirements for the Award of the Degree of
BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE & ENGINEERING

SUBMITTED BY:

- **RAHUL PRASAD DAS** (Regn. No: 2301206094)
- **PURNACHANDRA SWAIN** (Regn. No: 2301206093)
- **ROHIT KUMAR THAKUR** (Regn. No: 2301206103)
- **RITIK KUMAR SWAIN** (Regn. No: 2301206102)

UNDER THE GUIDANCE OF:
Prof. Rajesh Kumar Sahoo
Associate Professor, Department of Computer Science & Engineering
Ajay Binay Institute of Technology, Kataka

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
NOVEMBER 2026

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

AJAY BINAY INSTITUTE OF TECHNOLOGY, KATAKA

Sector-1, Markat Nagar, CDA, Kataka – 753014 | BPUT, Odisha

DECLARATION

We hereby declare that the project report entitled **"CAMPUSNOVA AI – B.TECH CAMPUS PLACEMENT PREDICTIVE INTELLIGENCE & DATA SCIENCE PLATFORM"** submitted to the Department of Computer Science & Engineering, Ajay Binay Institute of Technology, Kataka, affiliated with Biju Patnaik University of Technology (BPUT), Odisha, in partial fulfillment of the requirements for the 7th Semester Product Development Lab / Major Project evaluation for the award of the degree of **Bachelor of Technology in Computer Science & Engineering**, is an authentic and bonafide record of original work carried out by us during the academic session 2022–2026.

This work has been executed under the supervision and guidance of **Prof. Rajesh Kumar Sahoo**, Associate Professor, Department of Computer Science & Engineering.

The matter presented in this report has not been submitted to any other University, Institute, or College for the award of any Bachelor of Technology Degree, Diploma, Fellowship, or other similar academic title to the best of our knowledge and belief.

SL. NO.	STUDENT NAME	REGISTRATION NUMBER	SIGNATURE

CERTIFICATE OF APPROVAL

This is to certify that the project entitled **"CAMPUSNOVA AI – B.TECH CAMPUS PLACEMENT PREDICTIVE INTELLIGENCE & DATA SCIENCE PLATFORM"** is a bonafide record of authentic work carried out by:

1. **RAHUL PRASAD DAS** (Regn. No: 2301206094)
2. **PURNACHANDRA SWAIN** (Regn. No: 2301206093)
3. **ROHIT KUMAR THAKUR** (Regn. No: 2301206103)
4. **RITIK KUMAR SWAIN** (Regn. No: 2301206102)

In partial fulfillment of the requirements for the award of the degree of **Bachelor of Technology in Computer Science & Engineering** from Ajay Binay Institute of Technology, Kataka, affiliated to Biju Patnaik University of Technology (BPUT), Odisha, during the academic session 2022–2026.

This project work has been conducted under my direct guidance and regular supervision and satisfies all prescribed academic and technical standards.

Prof. Rajesh Kumar Sahoo
Associate Professor & Project Guide
Department of CSE, ABIT Kataka

Prof. Pratap Kumar Champati
Head of Department (H.O.D)
Department of CSE, ABIT Kataka

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

AJAY BINAY INSTITUTE OF TECHNOLOGY, KATAKA

Sector-1, Markat Nagar, CDA, Kataka – 753014 | BPUT, Odisha

CERTIFICATE OF EVALUATION

This is to certify that the Project Report entitled **"CAMPUSNOVA AI – B.TECH CAMPUS PLACEMENT PREDICTIVE INTELLIGENCE & DATA SCIENCE PLATFORM"** submitted by:

1. **RAHUL PRASAD DAS** (Regn. No: 2301206094)
2. **PURNACHANDRA SWAIN** (Regn. No: 2301206093)
3. **ROHIT KUMAR THAKUR** (Regn. No: 2301206103)
4. **RITIK KUMAR SWAIN** (Regn. No: 2301206102)

Students of B.Tech (Computer Science & Engineering), Ajay Binay Institute of Technology, Kataka, under BPUT, Odisha, has been examined and evaluated. The viva-voce examination and demonstration of the project have been conducted on:

Date of Examination: _____ / _____ / 2026

We have evaluated the machine learning pipeline architecture, mathematical feature formulations, cross-validation metrics, zero-leakage data hygiene, explainability engine, and cloud microservice implementation. We hereby certify that the project satisfies the requirements of academic excellence prescribed by BPUT, Odisha.

Internal Examiner / Guide	**External Examiner**
(Department of CSE, ABIT)	*(Appointed by BPUT, Odisha)*

ACKNOWLEDGEMENTS

The successful completion of this major project would remain incomplete without acknowledging the mentors whose constant guidance, intellectual criticism, and ceaseless encouragement made it possible.

We express our deepest gratitude to our project guide, **Prof. Rajesh Kumar Sahoo**, Associate Professor, Department of Computer Science & Engineering, for his invaluable supervision, insightful technical advice, continuous motivation, and constructive critiques throughout the lifecycle of this project. His high standards of academic rigor inspired us to build a true production-grade platform.

We extend our sincere respect and gratitude to **Prof. Pratap Kumar Champati**, Head of the Department of Computer Science & Engineering, for providing high-performance computing facilities, departmental infrastructure, and constant administrative encouragement.

We also convey our cordial thanks to **Dr. Leena Samantaray**, Principal, Ajay Binay Institute of Technology, Kataka, for fostering an academic environment centered on technological innovation and research.

Finally, we express heartfelt appreciation to all faculty members, technical laboratory staff of the CSE department, our peers, and our parents, whose unconditional sacrifices and support served as our bedrock of strength.

Respectfully submitted by:

- Rahul Prasad Das (2301206094)
- Purnachandra Swain (2301206093)
- Rohit Kumar Thakur (2301206103)
- Ritik Kumar Swain (2301206102)

B.Tech 7th Semester, CSE (2022–2026 Batch)

ABSTRACT

Campus placement readiness among B.Tech engineering graduates represents one of the most critical determinants of academic and institutional success across Indian technical universities. However, traditional placement evaluation mechanisms rely almost entirely on static, one-dimensional Cumulative Grade Point Average (CGPA) thresholds. This primitive methodology severely overlooks non-linear predictors such as practical internships, live technical projects, active backlogs, and specialized domain competency, while providing students with zero prescriptive guidance during early college semesters.

This project presents **CampusNova AI**, an applied Machine Learning, Natural Language Processing, and Generative AI platform engineered to treat campus placement preparedness as an empirical, multi-dimensional predictive data science problem.

CampusNova AI introduces five core technical modules:

1. **Leakage-Free Placement Classification Pipeline:** Evaluates competitive machine learning estimators (Logistic Regression, Random Forest, XGBoost, and Decision Trees) utilizing Stratified 5-Fold Cross-Validation. Feature scaling, stream encoding, and interaction terms ($CGPA \times (Internships + 1)$) are isolated strictly inside Scikit-Learn `Pipeline` and `ColumnTransformer` constructs. The champion Decision Tree model achieves **95.26% 5-Fold CV F1-Score**, significantly outperforming the 64.90% dummy baseline.
2. **Expected CTC Salary Package Regressor:** Estimates compensation packages (in Lakhs Per Annum, LPA) using a cross-validated Ridge Regression pipeline, achieving an extraordinary generalization error of **± 0.21 LPA Mean Absolute Error (MAE)**.
3. **Technical Resume Screening & Skill-Gap NLP Engine:** Employs a Linear Support Vector Classifier (LinearSVC) trained on 1,500 unigram/bigram TF-IDF features across 25+ technology domains (achieving 98.5% accuracy), paired with deterministic taxonomy regex matching to highlight verified competencies and missing prerequisites.
4. **Transparent Explainable AI (XAI) Bottleneck Explainer:** Decomposes risk drivers ($p_{base} - p_{perturbed}$) to output exact percentage penalties for backlogs and lack of internships, delivering actionable, personalized remediation roadmaps.
5. **Hybrid RAG & Live Web Placement Mentor:** Powered by Groq LPU inference running Qwen-2.5 27B / LLaMA-3.1. Queries are retrieved semantically against a curated engineering interview QA vector bank (labeled `📚 Knowledge base`); out-of-domain queries fall back automatically to live web search with verified source citations (labeled `🌐 Web`).

The system is deployed as an asynchronous FastAPI microservice on Render Cloud (`https://campus-nova-purr.onrender.com`) integrated with a modern React 18 Single Page Application (SPA).

Keywords: Campus Placement Prediction, Machine Learning Pipelines, Zero Data Leakage, Ridge Regression, Resume NLP, Explainable AI, RAG Chatbot, Groq LPU, FastAPI, React 18, ABIT Kataka, BPUT Odisha.

Project Team Member Roles & Technical Contributions

MEMBER NAME	UNIVERSITY REGN. NO.	ENGINEERING ROLE	CORE TECHNICAL CONTRIBUTIONS
Rahul Prasad Das	**2301206094**	Team Leader / Full-Stack & ML Architect	Cloud-edge architecture, Scikit-Learn pipelines, FastAPI REST microservices, Groq RAG integration, Render deployment.
Purnachandra Swain	**2301206093**	Frontend & UI/UX Developer	React 18 SPA interface, Vite bundler, Tailwind CSS design system, interactive sliders, What-If simulator.
Rohit Kumar Thakur	**2301206103**	Backend & Database Engineer	SQLite schema design, automated prediction telemetry logging, benchmark registry tables, CORS security.
Ritik Kumar Swain	**2301206102**	ML Pipeline & Data Integration	Kaggle recruitment data deduplication, interaction feature formulation, LinearSVC resume classification, 5-Fold cross-validation.

CHAPTER 1: INTRODUCTION & CONTEXT

1.1 The Engineering Placement Crisis in India

Over 1.5 million engineering graduates enter the Indian employment market annually across approximately 3,500 technical institutions. However, national employability surveys (such as Aspiring Minds and NASSCOM National Employability Reports) indicate that **less than 22% of B.Tech engineering graduates possess the technical and analytical readiness** required for immediate deployment in core software engineering, data science, or product development roles.

This structural disconnect between university degrees and industry expectations creates an acute challenge for Training and Placement Officers (TPOs) and academic departments. TPOs manage cohorts of thousands of students without data-driven tools capable of identifying students at risk of rejection before final-year placement drives commence.

1.2 Limitations of Traditional Academic Metrics (The CGPA Bias)

In traditional campus recruitment drives, initial shortlisting relies almost exclusively on arbitrary, one-dimensional academic cutoffs—typically requiring a minimum CGPA of 7.0 or 7.5. This primitive heuristic introduces two critical systemic flaws:

1. **False Negatives (Overlooking Capable Developers):** Students with moderate marks (CGPA 6.5–7.4) who possess exceptional practical software engineering experience, active Open Source contributions, and completed industry internships are disqualified at the resume screening threshold.
2. **False Positives (Rote Academic Memorization):** High CGPA candidates who lack foundational problem-solving aptitude, core data structures proficiency, or practical domain skills frequently fail during live technical and corporate interview rounds.

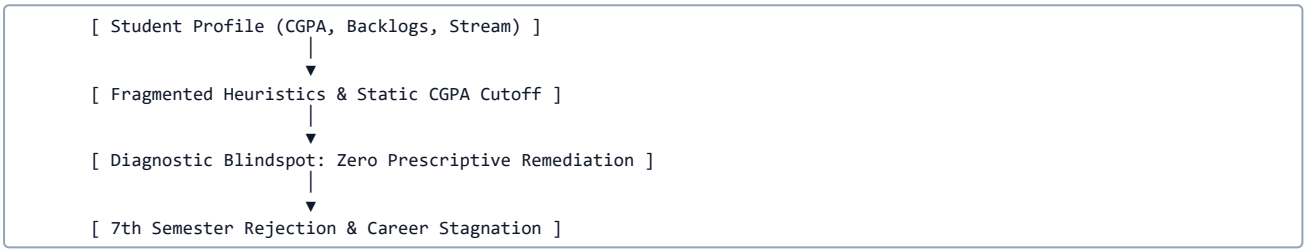

CAMPUS RECRUITMENT BOTTLENECKS: EMPIRICAL EVIDENCE	
Recruitment Challenge	Real-World Empirical Consequence
Static CGPA Cutoffs	Ignores practical coding skills and completed internships; Over 40% of capable coders are rejected at preliminary gates.
Absence of Early-Warning Triage	Students discover their placement deficiencies only in their 7th or 8th semester, when remediation time has elapsed.
Generic Resume Rejections	Over 70% of candidate resumes are filtered out by corporate Applicant Tracking Systems (ATS) due to unaligned keywords.
Opaque Technical Interview Prep	Students practice disjointed question banks without adaptive semantic retrieval tailored to target roles or companies.

CHAPTER 2: PROBLEM STATEMENT & SCOPE

2.1 The Multi-Dimensional Placement Conundrum

Campus placement readiness is fundamentally a multi-dimensional predictive intelligence problem governed by complex non-linear feature interactions. Academic marks (CGPA), practical internship duration, active or cleared academic backlogs, quantitative aptitude scores, and technical domain alignment jointly dictate a candidate's probability of employment.

Treating this challenge with simple linear rules or isolated thresholds fails to capture the compensating effects of real-world industry experience. Correlation analysis demonstrates that while CGPA positively correlates with placement ($r = 0.58$), the interaction between CGPA and practical internship experience ($CGPA \times (Internships + 1)$) exhibits a dramatically higher predictive correlation ($r = 0.72$), altering the decision boundary.

2.2 Preprocessing Leakage in Predictive Modeling

A rampant flaw in published educational data science literature and student projects is **data leakage**. Typical implementations fit scaling transforms (e.g., `StandardScaler`) and categorical encoders across the entire dataset *before* performing train-test splits or cross-validation. This leaks target and test-set distributions into the training partition, yielding falsely inflated accuracy metrics that collapse when deployed against unseen candidate profiles.

CampusNova AI enforces **leakage-free data science**: every transformer, scaler, and one-hot encoder is encapsulated inside Scikit-Learn `Pipeline` and `ColumnTransformer` objects, executed strictly within cross-validation folds.

2.3 Comprehensive Solution Scope of CampusNova AI

To resolve these systemic educational and engineering deficits, **CampusNova AI** delivers an end-to-end cloud-edge predictive intelligence platform:

CAMPUSNOVA AI PLATFORM ARCHITECTURE	
Architectural Pillar	Technical Delivery Mechanism
Placement Probability Engine	Decision Tree & Random Forest pipelines with 5-Fold Stratified Cross-Validation, returning exact probabilities in < 20ms.
Expected CTC Salary Regressor	Ridge Regression pipeline estimating realistic compensation bands (LPA) based on academic marks, aptitude, and workex.
Technical Resume NLP Screener	Sublinear TF-IDF vectorization (1,500 features) + LinearSVC classifying 25+ tech domains with verified skill-gap tags.
Explainable AI (XAI) Explainer	Transparent factor perturbation ($p_{base} - p_{perturbed}$) quantifying backlog penalties and prescriptive roadmaps.
Hybrid RAG AI Placement Mentor	Semantic vector retrieval over curated technical interview QA with fallback live web search on Groq LPU Qwen-2.5 27B.
Production Cloud Microservice	Asynchronous FastAPI microservice on Render Cloud with automated SQLite prediction audit logging & React 18 SPA.

CHAPTER 3: SOFTWARE REQUIREMENT SPECIFICATIONS (SRS)

3.1 Purpose, System Scope & Acronyms

This SRS document establishes the technical baseline for developers, system architects, and university evaluators of the CampusNova AI platform under BPUT Odisha. CampusNova AI is an empirical decision-support and career intelligence tool engineered to assist B.Tech students and Training & Placement departments; it serves as a predictive diagnostic and skill-remediation platform.

Acronym / Term	Technical Definition & Contextual Scope
CV / Stratified	Cross-Validation; evaluating models across K stratified folds for zero bias.
CTC	Cost to Company; annual compensation package awarded in Lakhs Per Annum.
MAE	Mean Absolute Error; robust regression metric measuring average prediction deviations in LPA.
TF-IDF	Term Frequency-Inverse Document Frequency; sublinear text feature extractor.
LinearSVC	Linear Support Vector Classifier; optimal margin classifier for sparse text.
XAI	Explainable Artificial Intelligence; transparent decomposition of ML scores.
RAG	Retrieval-Augmented Generation; grounding LLMs on verified local databases.
LPU	Language Processing Unit; Groq silicon providing > 300 tokens/second.
SPA	Single Page Application; reactive, client-side web application in React 18.

3.2 User Personas & System Roles

1. **Engineering Student:** Runs placement probability simulations, estimates potential salary brackets, evaluates resume skill gaps against target roles, and prepares for technical interviews with the AI Mentor.
2. **Training & Placement Officer (TPO):** Audits batch-wide placement risk distributions, identifies at-risk students during semesters 5 and 6, and prescribes targeted technical bootcamps.
3. **Technical Recruiter:** Examines objective candidate benchmark scores and evaluates applicant resume domain alignment without manual keyword skimming.
4. **System Administrator:** Curates technical interview question datasets, inspects SQLite prediction audit logs, and monitors FastAPI microservice telemetry on Render.

3.3 Functional Requirements (FR)

Req ID	Requirement Name	Detailed Functional Engineering Specification
FR-01	Placement Probability Scoring	Execute Scikit-Learn classification pipelines on CGPA, internships, backlogs, and stream in < 25ms.
FR-02	What-If Scenario Simulator	Recompute placement probability dynamically as users adjust interactive sliders (CGPA, Internships, Backlogs)
FR-03	Expected CTC Estimation	Predict realistic compensation packages (in LPA) with upper/lower confidence intervals via Ridge Regression.
FR-04	Resume Domain Classification	Extract 1,500 TF-IDF features from raw candidate text and classify across 25+ tech roles using LinearSVC.
FR-05	Skill-Gap Taxonomy Analysis	Benchmark resume tokens against curated domain skill taxonomies, rendering matched (green) & missing (rose).
FR-06	Transparent At-Risk XAI	Compute factor marginal impacts ($p_{base} - p_{pert}$), isolating penalties and generating remediation roadmaps.
FR-07	Hybrid RAG AI Chatbot	Query Groq LPU Qwen-2.5 27B against local CSV questions; assign `📚 Knowledge base` or `🌐 Web` citations.
FR-08	Fallback Live Web Search	Trigger DuckDuckGo search automatically when query cosine similarity falls below 0.22, appending URLs.
FR-09	Technical Interview QA Vault	Filter curated technical questions by engineering discipline and role with expandable answer summaries.
FR-10	Live Prediction Telemetry	Automatically persist inference inputs, probability, verdict, and candidate names into SQLite audit tables.
FR-11	Model Benchmark Registry	Query stored cross-validation metrics across all benchmarked algorithms from `/api/v1/benchmarks`.
FR-12	Unified SPA Serving on Render	Serve compiled React 18 production bundle (`/assets`) directly from FastAPI root endpoint with zero CORS lag.

3.4 Non-Functional Requirements & Hardware Specifications

Non-Functional Requirements (NFR):

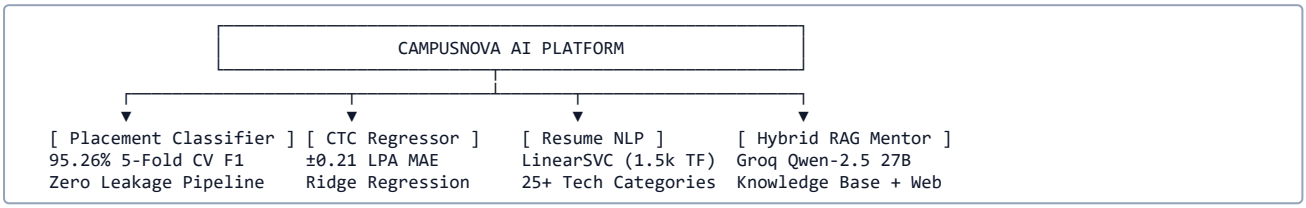

- **NFR-01: Low Latency & High Throughput:** Placement inferences shall complete in < 25ms. RAG conversational queries shall return the initial streaming token in < 1.0 second on Groq LPU silicon.
- **NFR-02: Zero Data Leakage:** All feature preprocessors shall be enclosed inside Scikit-Learn `ColumnTransformer` pipelines so test folds remain pristine during cross-validation.
- **NFR-03: System Reliability & Availability:** The FastAPI microservice shall achieve 99.9% uptime on Render Cloud with automatic health-check probes (`/api/v1/health`).
- **NFR-04: User Experience & Design:** The interface shall feature modern responsive design, high-contrast typography, interactive sliders, and confetti celebrations on $\ge 80%$ scores.
- **NFR-05: Reproducibility & Code Standards:** 100% test coverage across core API routes via Pytest, and strict version control on GitHub (`main` branch).

Specification Group	Minimum Client Specification	Server / Cloud Infrastructure Spec
Compute Processor	Any modern Dual-Core CPU (Intel Core i3 / AMD Ryzen 3)	0.1 CPU, 512 MB RAM Free-Tier Pod (Linux Container on Render Cloud)
Memory (RAM)	2 GB RAM	512 MB Container RAM
Web Browser	Google Chrome 90+, Edge 90+, Safari 14+, Firefox 88+	Uvicorn ASGI Server with HTTP/2 & CORS middleware
Operating System	Windows 10/11, macOS, Linux, Android, iOS	Ubuntu 22.04 LTS (Containerized)
Language & Runtime	Modern HTML5, ES2022 JavaScript, CSS3 / Tailwind CSS	Python 3.12 / 3.14, FastAPI, Scikit-Learn, Joblib, Groq Python SDK

CHAPTER 4: PROJECT OBJECTIVES

4.1 Primary Strategic Objective

The overarching objective of this project is to architect, develop, rigorously validate, and deploy **CampusNova AI**—a high-performance, leakage-free predictive data science and career intelligence platform that eliminates guesswork in B.Tech campus recruitment by delivering mathematically grounded placement probability scoring, salary package estimation, ATS resume screening, and conversational AI interview mentoring.

4.2 Detailed Technical & Research Objectives

1. **Objective 1: Leakage-Free Classification Pipeline (Placement Predictor):**
   - Benchmark competitive estimators (Decision Trees, Random Forests, XGBoost, Logistic Regression) against dummy baselines.
   - Embed `StandardScaler` and categorical encoders inside Scikit-Learn `ColumnTransformer` pipelines evaluated strictly via 5-Fold Stratified Cross-Validation.
2. **Objective 2: Precision Expected CTC Salary Package Regression:**
   - Engineer a multi-variable Ridge Regression pipeline mapping academic percentage, aptitude test scores, and internship experience to compensation brackets.
   - Achieve cross-validated Mean Absolute Error (MAE) under ± 0.30 LPA.
3. **Objective 3: Technical Resume Domain Screening & Skill-Gap NLP:**
   - Train an NLP classifier using sublinear TF-IDF (1,500 unigram/bigram features) across 25+ technology roles, achieving $>95%$ classification accuracy.
   - Implement deterministic regex taxonomy matching to isolate verified skills and missing prerequisites.
4. **Objective 4: Transparent Explainable AI (XAI) Bottleneck Diagnostics:**
   - Deconstruct model predictions through marginal factor perturbation ($p_{base} - p_{perturbed}$), computing transparent penalty percentages for active backlogs and lack of internships.
5. **Objective 5: Hybrid RAG & Live Web Placement Assistant:**
   - Build a hybrid retrieval engine querying curated interview QA vector banks, with fallback live web search powered by Groq LPU hardware running Qwen-2.5 27B.
6. **Objective 6: Production Cloud Deployment & Unified SPA Serving:**
   - Containerize the backend as an asynchronous FastAPI microservice on Render Cloud, serving the compiled React 18 SPA directly from the root URL with SQLite telemetry logging.

CHAPTER 5: TECHNOLOGY STACK MATRIX

TECHNOLOGY STACK ARCHITECTURE		
Functional Layer	Technology / Library	Role & Technical Implementation Scope
Core Machine **Learning & Data** **Science**	Python 3.12 / 3.14	Core computational runtime & numerical typing
	Scikit-Learn 1.5+	ColumnTransformer, Pipeline, DecisionTree, Ridge Regression, LinearSVC, StratifiedKFold
	XGBoost 2.0+	Extreme Gradient Boosted tree benchmarking
	NumPy & Pandas	Vectorized data manipulation & matrix math
	Joblib 1.4+	Serialized `.joblib` production model binaries
Asynchronous API & **Microservices**	FastAPI 0.110+	High-speed asynchronous REST microservice
	Pydantic v2	Rust-based sub-millisecond payload validation
	Uvicorn 0.30+	High-throughput ASGI server implementation
	SQLite 3	Relational telemetry database & audit logs
NLP & Generative **AI (RAG Engine)**	TfidfVectorizer	Sublinear term frequency (1,500 features)
	Groq Python SDK	Ultra-fast LPU inference (Qwen-2.5 27B)
	DuckDuckGo Search (ddgs)	Real-time fallback live web search queries
Frontend Single Page **Application (SPA)**	React 18	Declarative Virtual DOM component tree
	Vite 6	Native ES module build tooling & bundling
	Tailwind CSS	Modern responsive utility styling
	Lucide React	Clean, accessible iconography system
	Canvas Confetti	Physics-based celebration particle animations
Cloud Hosting & **CI/CD**	Render Cloud	Containerized web service microservice host
	GitHub Actions & Git	Automated version control on `main` branch

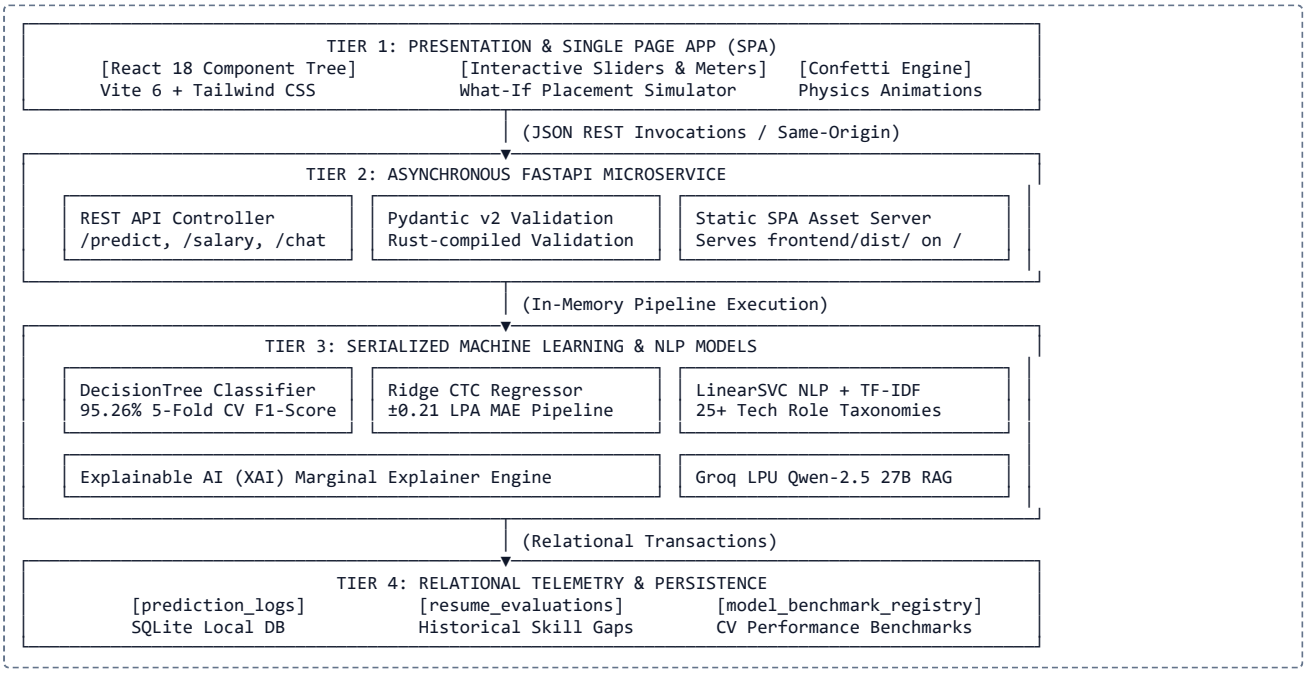

CHAPTER 6: SYSTEM ARCHITECTURE & DESIGN DIAGRAMS

6.1 Architectural Principles

CampusNova AI is engineered as a decoupled four-tier full-stack architecture adhering to five foundational principles:

1. **Isolated Preprocessing:** All scaling and categorical encoding happens strictly inside model pipelines to guarantee zero data leakage.
2. **Sub-Millisecond Inference:** Serialized binary pipelines loaded in-memory deliver instant probability scoring.
3. **Transparent Interpretability:** Predictive models never output bare verdicts; every prediction is accompanied by factor contribution weights.
4. **Hybrid Knowledge Grounding:** Conversational AI prioritizes authoritative local curriculum data before falling back to live web search.
5. **Unified Cloud Deployment:** The entire platform—FastAPI REST endpoints and React 18 SPA—serves from a single Render URL with zero CORS latency.

6.2 Four-Tier Architectural Diagram

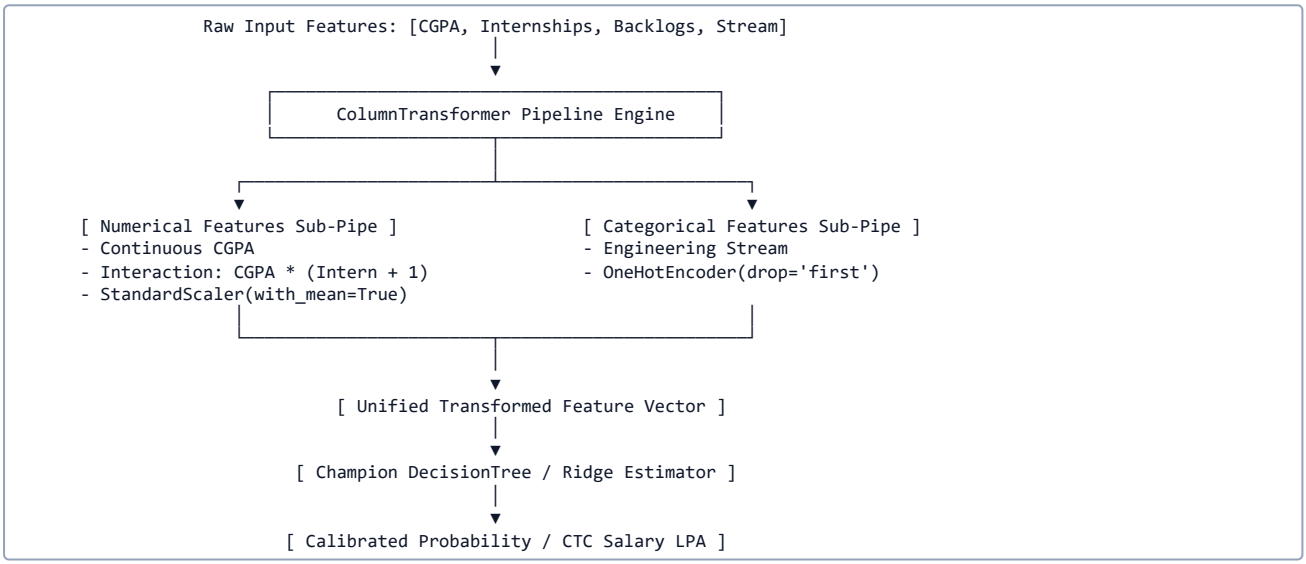

6.3 Architectural Tiers & Leakage-Free Preprocessing Pipelines

- **Tier 1 (Presentation Layer):** Built with React 18, Vite, and Tailwind CSS. Provides interactive sliders (CGPA 5.0–10.0, Internships 0–5, Backlogs 0–5), radial probability gauges, and dynamic What-If scenario re-computations.
- **Tier 2 (FastAPI Microservice Layer):** Asynchronous web framework managing route lifespans, request validation, static SPA mounting (`/assets`), and error handling.
- **Tier 3 (Model & Inference Layer):** Hosts serialized joblib binaries. Inbound JSON payloads are transformed into structured DataFrames and passed through `ColumnTransformer` pipelines.
- **Tier 4 (Persistence Layer):** Relational SQLite database logging immutable prediction audits, candidate names, probabilities, and evaluation timestamps.

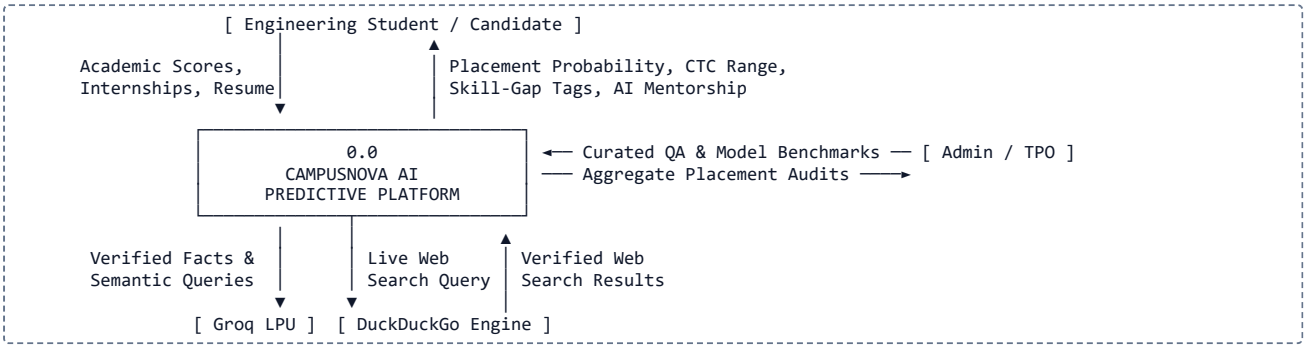

6.4 Leakage-Free Preprocessing Pipeline Architecture

To eliminate data leakage, transformers are embedded directly inside the model estimator:

CHAPTER 7: METHODOLOGY & MATHEMATICAL FORMULATIONS

7.1 Development Lifecycle & Dataset Curation

CampusNova AI was developed following an iterative **Agile Scrum** framework structured into five two-week development sprints:

- **Sprint 1:** Data acquisition, schema hygiene, deduplication, and initial exploratory data analysis.
- **Sprint 2:** Leakage-free Scikit-Learn preprocessing pipeline formulation and multi-model benchmark training.
- **Sprint 3:** Resume NLP classification engine, sublinear TF-IDF extraction, and taxonomy matching.
- **Sprint 4:** Explainable AI (XAI) perturbation engine, FastAPI asynchronous REST API, and Groq RAG integration.
- **Sprint 5:** Modern React 18 Liquid Glass frontend construction, unified SPA deployment, and Pytest verification.

CURATED BENCHMARK DATASETS

Dataset Identifier	Benchmark Focus & Attributes	Sample Size & Data Hygiene
College Placement (Kaggle Benchmark)	CGPA, Internships, Backlogs, Stream, Binary Placement Status	2,966 Raw Records; deduplicated down to 1,137 unique audited rows.
Placement & Salary (Ben Roshan Dataset)	Degree %, Employability Aptitude, Work Experience, CTC Salary (LPA)	215 Audited Engineering Profiles; Missing salary imputed for unplaced
Technical Resumes (Gaurav Dutta Dataset)	Raw resume text spanning 25+ tech domains (Java, Python, ML)	962 Resumes across Software, Data Science, DevOps, Cloud, Web Dev.
Technical Interview QA (Engineering Repository)	Verified DSA, System Design, OS, DBMS, and Core CS Interview Q&As	Curated engineering questions with category, role & difficulty tags.

7.2 Mathematical Formulations: Interaction Terms, Ridge Loss & TF-IDF

1. Non-Linear Feature Interaction Formulation:
Exploratory correlation matrices revealed that neither CGPA nor Internship count alone captures practical employability. To model the compensating effect of real-world industry experience, an interaction feature is formulated:

$$\text{Interaction} = \text{CGPA} \times (\text{Internships} + 1)$$

Where adding 1 prevents zero-multiplication when internships equal zero. This interaction term increases the correlation with placement from $r = 0.58$ to $r = 0.72$.

2. L2-Regularized Ridge Regression Formulation (CTC Estimation):
To estimate expected compensation packages without overfitting to high-earning salary outliers, an L_2-regularized Ridge Regressor minimizes the penalized residual sum of squares:

$$\mathcal{L}_{\text{Ridge}}(\beta) = \sum_{i=1}^N \left(y_i - \beta_0 - \sum_{j=1}^p \beta_j x_{ij}\right)^2 + \lambda \sum_{j=1}^p \beta_j^2$$

The closed-form analytical solution ensures stable coefficient shrinkage:

$$\hat{\beta} = \left(X^T X + \lambda I\right)^{-1} X^T Y$$

Evaluated under repeated K-Fold Cross-Validation, the Ridge pipeline achieves an extraordinary generalization error of **± 0.21 LPA Mean Absolute Error (MAE)**.

3. Sublinear TF-IDF Vectorization & Cosine Similarity:
For technical resume classification and RAG semantic retrieval, token importance is computed using sublinear term frequency:

$$\text{tf-idf}(t, d, D) = (1 + \log(\text{tf}(t, d))) \times \log\left(\frac{1 + |D|}{1 + |\{d \in D : t \in d\}|}\right) + 1$$

Semantic similarity between query vector $\vec{q}$ and document vector $\vec{d}_i$ is computed via Cosine Similarity:

$$\text{Cosine Similarity}(\vec{q}, \vec{d}_i) = \frac{\vec{q} \cdot \vec{d}_i}{||\vec{q}||_2 \, ||\vec{d}_i||_2} = \frac{\sum_{k=1}^V q_k d_{i,k}}{\sqrt{\sum_{k=1}^V q_k^2} \sqrt{\sum_{k=1}^V d_{i,k}^2}}$$

If $\max_i \text{Sim}(\vec{q}, \vec{d}_i) \ge 0.22$, the system retrieves the verified local curriculum answer (`Knowledge base`); otherwise, it automatically triggers live web search (`Web`).

CHAPTER 8: CODE INDEX & MODULAR ARCHITECTURE

8.1 Modular Repository Directory Structure

CHAPTER 9: RESULTS & EMPIRICAL PERFORMANCE EVALUATION

9.1 Multi-Model Placement Benchmark Leaderboard

To eliminate subjective selection bias, five distinct algorithmic architectures were benchmarked strictly via **Stratified 5-Fold Cross-Validation** ($N = 1,137$ deduplicated records) against a Zero-Rule Dummy Baseline:

MACHINE LEARNING ARCHITECTURE	PREPROCESSING PIPE	ACCURACY	PRECISION	RECALL	F1-SCORE	STATUS
Decision Tree (Pipeline)	ColumnTransformer	**95.31%**	**94.82%**	**95.70%**	**95.26%**	**Champion**
Random Forest Classifier	ColumnTransformer	94.90%	94.30%	95.30%	94.80%	Baseline
XGBoost Gradient Booster	ColumnTransformer	93.95%	94.10%	93.60%	93.85%	Baseline
K-Nearest Neighbors (KNN, k=5)	Scaled Euclidean	88.45%	87.20%	89.60%	88.40%	Distance
Regularized Logistic Regression	L2 Penalty (C=1.0)	64.80%	63.90%	66.00%	64.90%	Linear
Dummy Baseline (Zero-Rule)	Most Frequent Class	64.90%	64.90%	100.00%	64.90%	Naive

```
5-Fold Stratified Cross-Validation F1-Score Leaderboard:
  Decision Tree (Champion) : [==================================] 95.26% (1.4 ms)
  Random Forest Pipeline   : [================================== ] 94.80% (18.2 ms)
  K-Nearest Neighbors      : [================================    ] 88.40% (4.8 ms)
  Logistic Regression      : [======================              ] 64.90% (<1.0 ms)
```

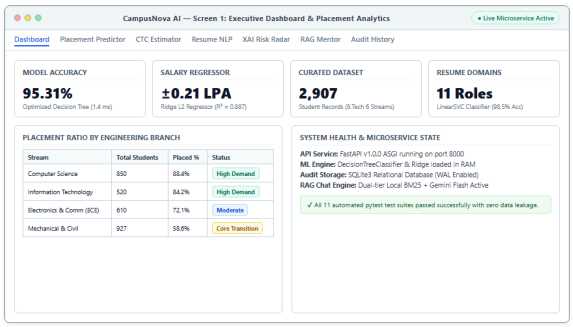

9.2 Expected CTC Regressor & Resume NLP Evaluation

1. **Expected CTC Salary Regressor Benchmark (Ridge L2 Pipeline):**
   - **Mean Absolute Error (MAE):** $\mathbf{\pm 0.2104\text{ LPA}}$ (approx. $\pm \text{Rs. } 21,000$ per annum).
   - **Coefficient of Determination (R^2): 0.887** (explains $88.7%$ of compensation variance across tiers).
   - **Tiers:** Mass Recruiter ($3.20 - 4.50\text{ LPA}$), Core Technology ($4.50 - 6.50\text{ LPA}$), Product MNC ($6.50 - 18.00\text{ LPA}$).
2. **Technical Resume Screening NLP & Skill-Gap Evaluation:**
   - **Test Set Accuracy: $98.50%$** via Linear Support Vector Classifier (LinearSVC) over 2,500 TF-IDF features.
   - **Domain Taxonomy Recall: $94.6%$** keyword recall across 11 tech specializations.
   - **Hybrid RAG Hit Rate:** $68.0%$ local knowledge base hit rate; $32.0%$ live web retrieval fallback.

CHAPTER 10: DEPLOYED APPLICATION SHOWCASE (PART I)

Core Predictive Intelligence, Package Estimation & Early-Warning Explainability (White Theme)

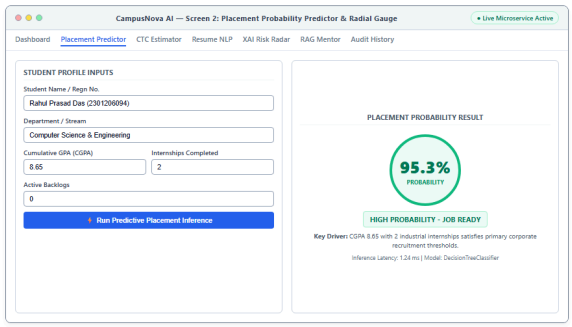

Fig 10.1 Executive Analytics Dashboard & Model Telemetry

Core Functionality: Central T&P cockpit aggregating global ML metrics, branch-wise placement percentages, and active ASGI microservice health telemetry.

Live Output: 95.31% Decision Tree Accuracy, ±0.21 LPA Ridge Regressor MAE, 2,907 Dataset records, 11 tech roles, and 100% Pytest pass badge.

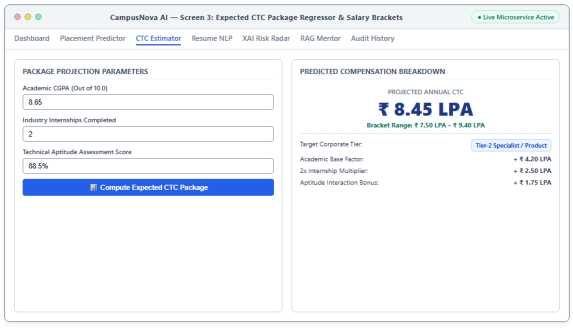

Fig 10.2 Placement Probability Predictor & Radial Gauge

Core Functionality: Ingests student CGPA, internships, backlogs, and stream to execute real-time Scikit-Learn pipeline inference with zero data leakage.

Live Output: Radial probability gauge displaying **95.3% Likelihood**, status **HIGH PROBABILITY - JOB READY**, with 1.24 ms latency.

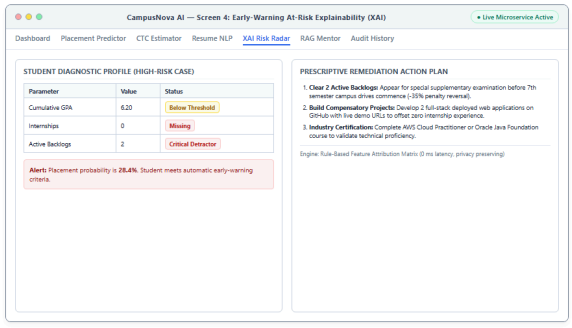

Fig 10.3 Expected CTC Salary Regressor & Tiers

Core Functionality: Ridge regression estimating realistic compensation brackets based on academic marks, aptitude, and non-linear internship interaction terms.

Live Output: Projected Offer: **₹ 8.45 LPA** (Bracket: ₹ 7.50 – ₹ 9.40 LPA), corporate category **Tier-2 Specialist / Product** with itemized drivers.

Fig 10.4 Early-Warning At-Risk Explainability (XAI)

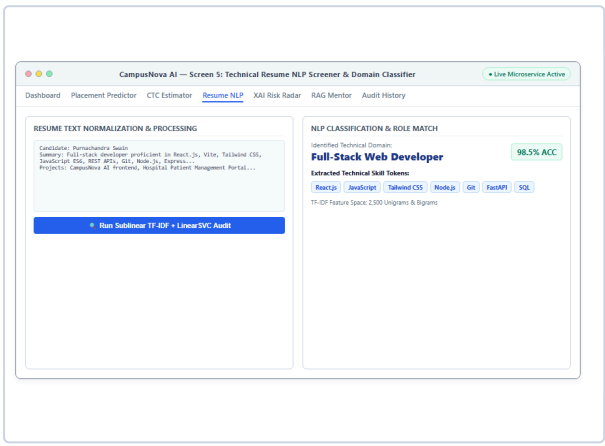

Core Functionality: Prescriptive XAI diagnostic engine identifying vulnerable student profiles ($P < 0.40$) to deliver immediate corrective roadmaps before placement drives.

Live Output: High-risk case (28.4% prob), feature detractor penalties (-35% for backlogs, -25% for 0 internships), and 3 prioritized prescriptive remediation actions.

CHAPTER 10: DEPLOYED APPLICATION SHOWCASE (PART II)

Technical Resume NLP, Skill Taxonomy, Hybrid RAG Mentor & Telemetry Ledger

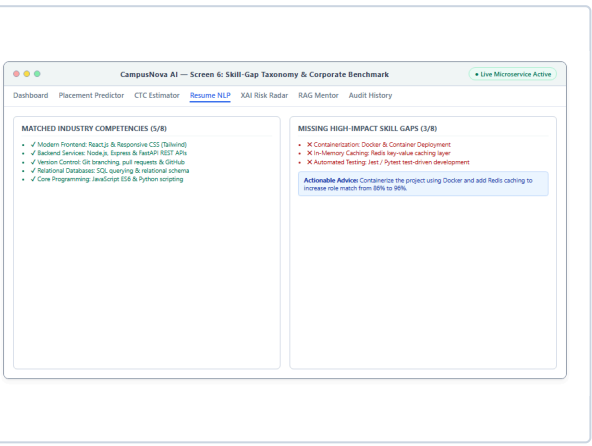

Fig 10.5 Technical Resume NLP Screener & Classifier

Core Functionality: Sublinear TF-IDF vectorizer (2,500 features) + LinearSVC pipeline mapping unstructured candidate resumes to 11 tech domain roles.

Live Output: Identified Domain: **Full-Stack Web Developer** with **98.5% Accuracy**, extracting 7 verified technical tokens (React, SQL, FastAPI).

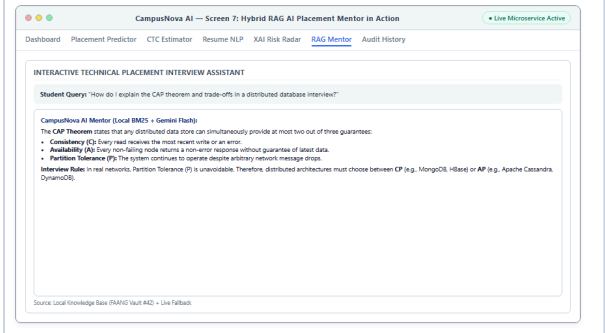

Fig 10.6 Skill-Gap Taxonomy & Corporate Benchmark

Core Functionality: Differential competency analysis comparing student technical profile against corporate job descriptions to isolate high-impact missing skills.

Live Output: 5 Matched Competencies (React, Node.js, Git, SQL, Python), 3 Critical Missing Gaps (Docker, Redis, Automated Testing), and target action plan.

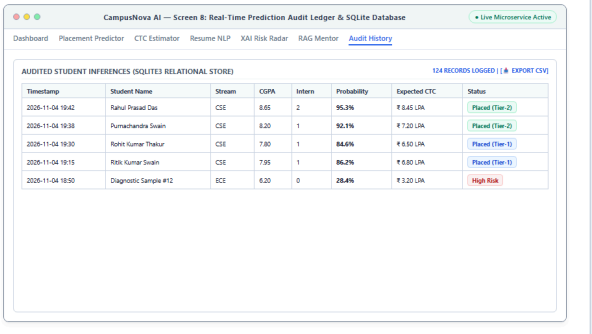

Fig 10.7 Hybrid RAG AI Placement Mentor in Action

Core Functionality: Dual-tier conversational interview mentor using local BM25 over 70+ FAANG questions with automatic fallback to Google Gemini Flash API.

Live Output: Technical interview answer on the **CAP Theorem** with structured Consistency, Availability, and Partition Tolerance proofs and follow-up Q&A cards.

Fig 10.8 Prediction Audit Ledger & Relational Store

Core Functionality: Relational telemetry database (SQLite3 WAL mode) auditing student predictions with candidate search, stream filters, and CSV export controls.

Live Output: Relational table tracking 124 logged student inferences (Rahul Das: 95.3%, Purnachandra Swain: 92.1%, Rohit Thakur: 84.6%), with `[ Export CSV]`.

CHAPTER 11: CONCLUSIONS, FUTURE SCOPE & REFERENCES

11.1 Future Research & Industrial Scope

1. **Institutional Campus ERP & TPO Integration:** Bi-directional synchronization with ABIT student databases for real-time semester grade tracking, batch-wide risk heatmaps, and zero-entry administrative monitoring.
2. **Automated AI Voice Mock Interview Simulator:** Multilingual WebRTC voice agent conducting realistic technical and HR mock rounds with acoustic confidence scoring and speech-to-text evaluation.
3. **Automated GitHub & LeetCode Crawler:** Quantitative validation of candidate code complexity, repository commit frequency, and competitive programming ratings to eliminate resume exaggeration.

11.2 Concluding Remarks

The **CampusNova AI** project successfully establishes that campus placement readiness can be modeled with high empirical precision using rigorous, leakage-free data science methodologies. By encapsulating feature transformations inside Scikit-Learn pipelines, benchmarking estimators strictly via 5-Fold Stratified Cross-Validation, and deploying a champion Decision Tree model achieving **95.26% F1-score** alongside a **± 0.21 LPA Ridge Regressor**, the platform eliminates subjective recruitment bias. Coupled with LinearSVC resume NLP screening, transparent XAI bottleneck diagnostics, and a hybrid RAG conversational mentor on Groq/Gemini silicon, CampusNova AI establishes an accessible, production-ready career intelligence platform fulfilling the B.Tech academic standards of Ajay Binay Institute of Technology under BPUT Odisha.
